

A CROSS-COUNTRY COMPARISON OF ENVIRONMENTAL TAXATION

Florens Flues

OECD, Centre for Tax Policy and Administration
& Environment Directorate

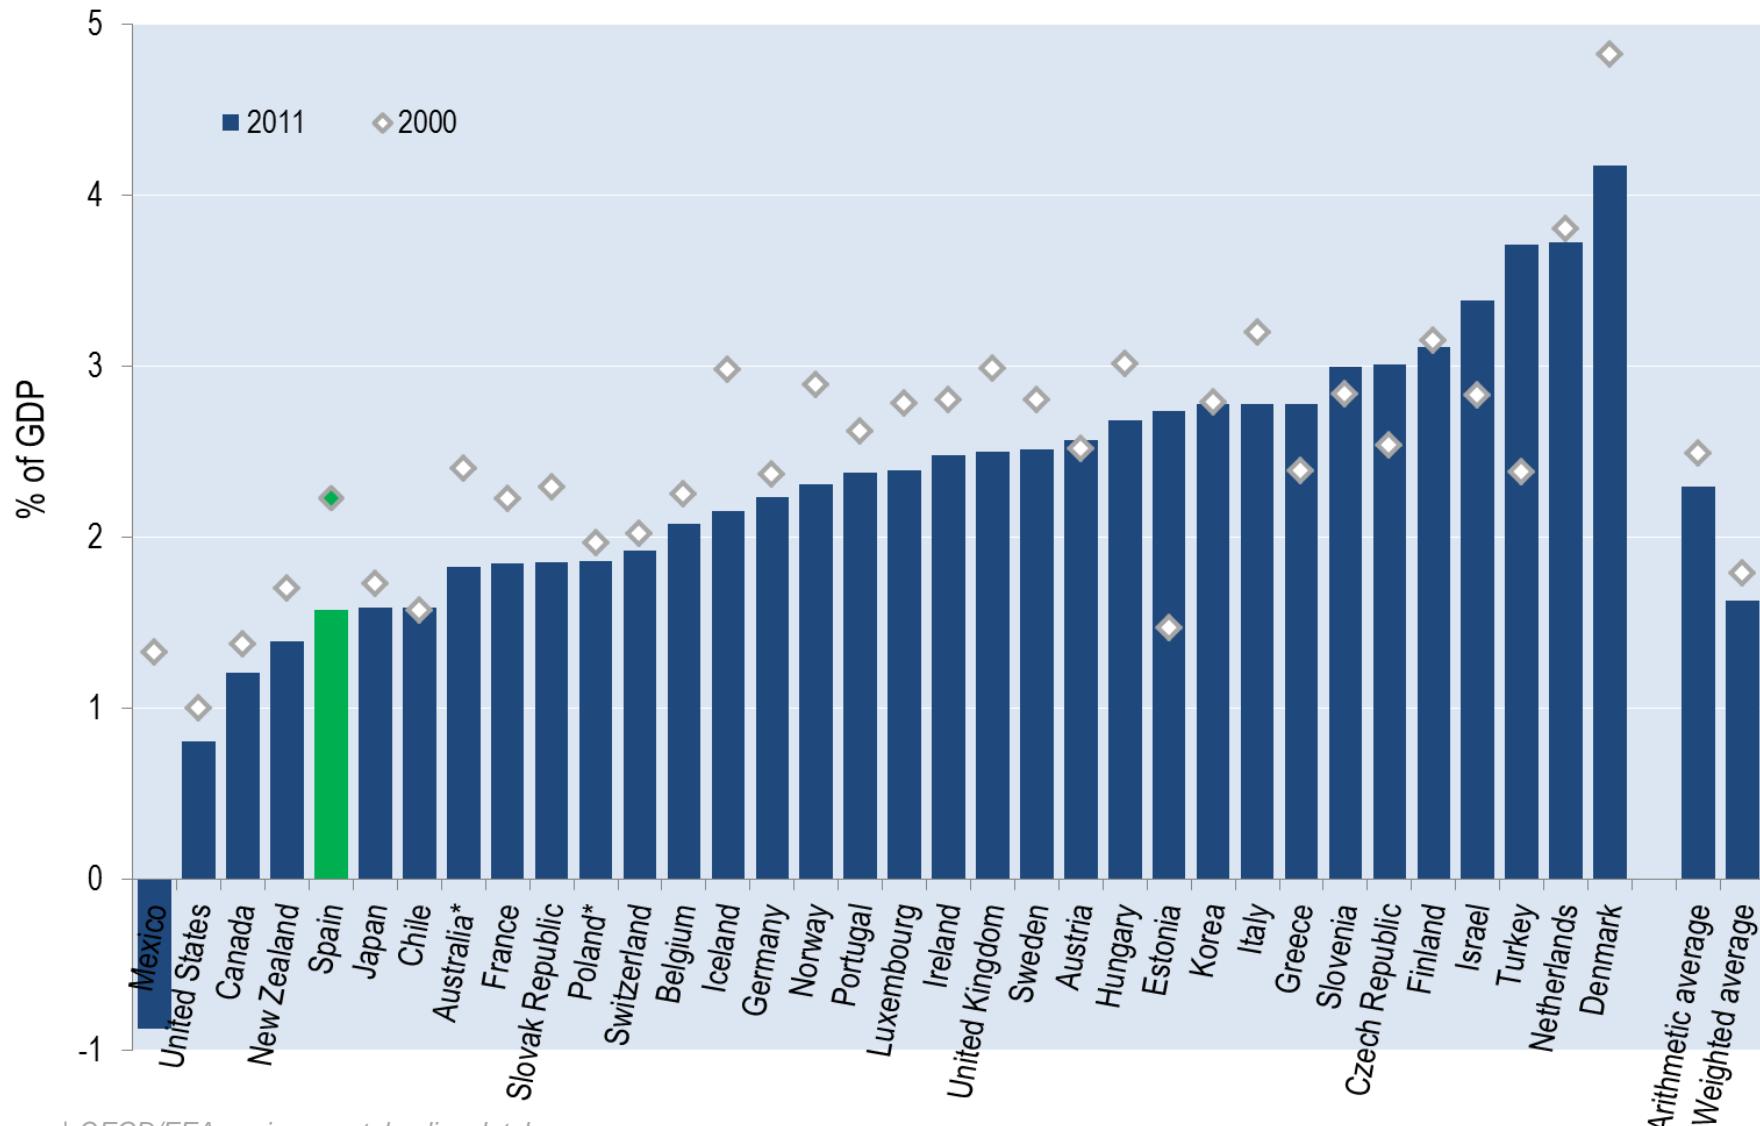

Outline

- Revenues raised from environmental taxes
 - across OECD countries
 - across time
- Structure of environmental taxes
 - Across goods
 - Across usage
- Comparison of Spain with other OECD countries

Revenues from environmental taxes

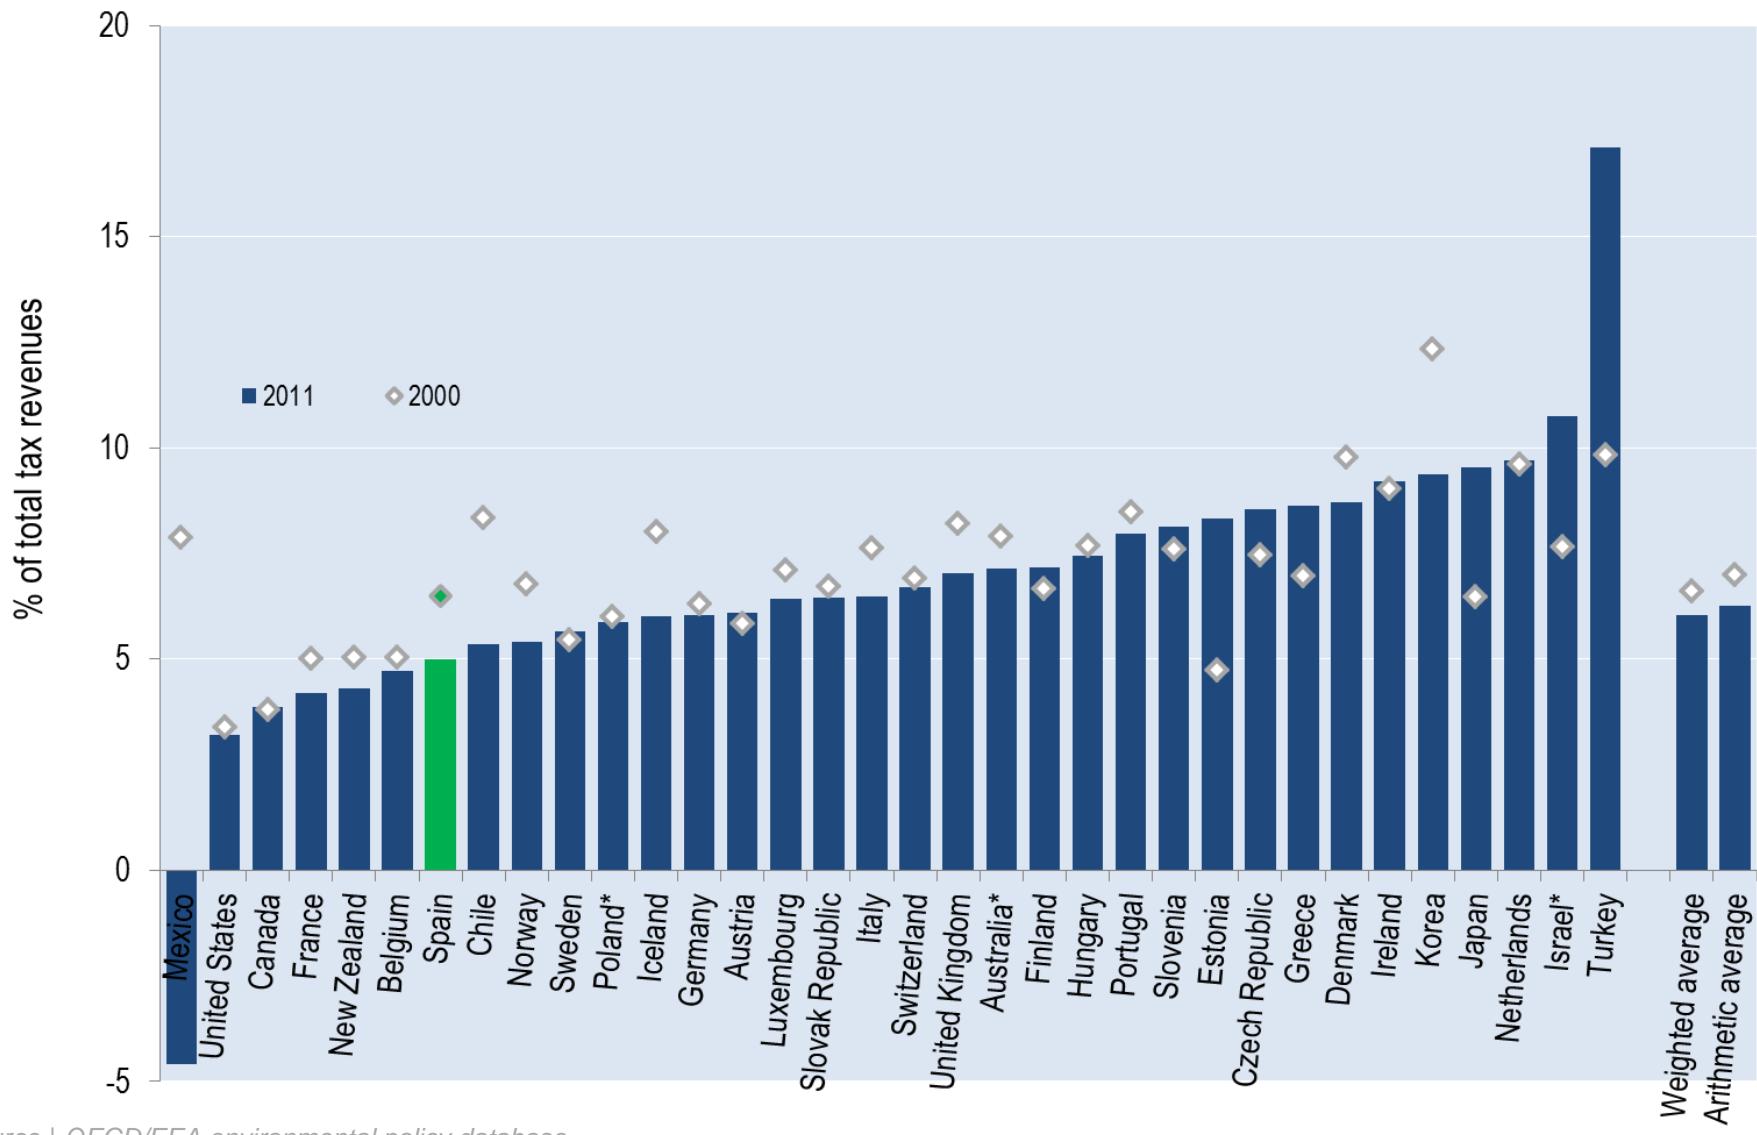

in per cent of GDP

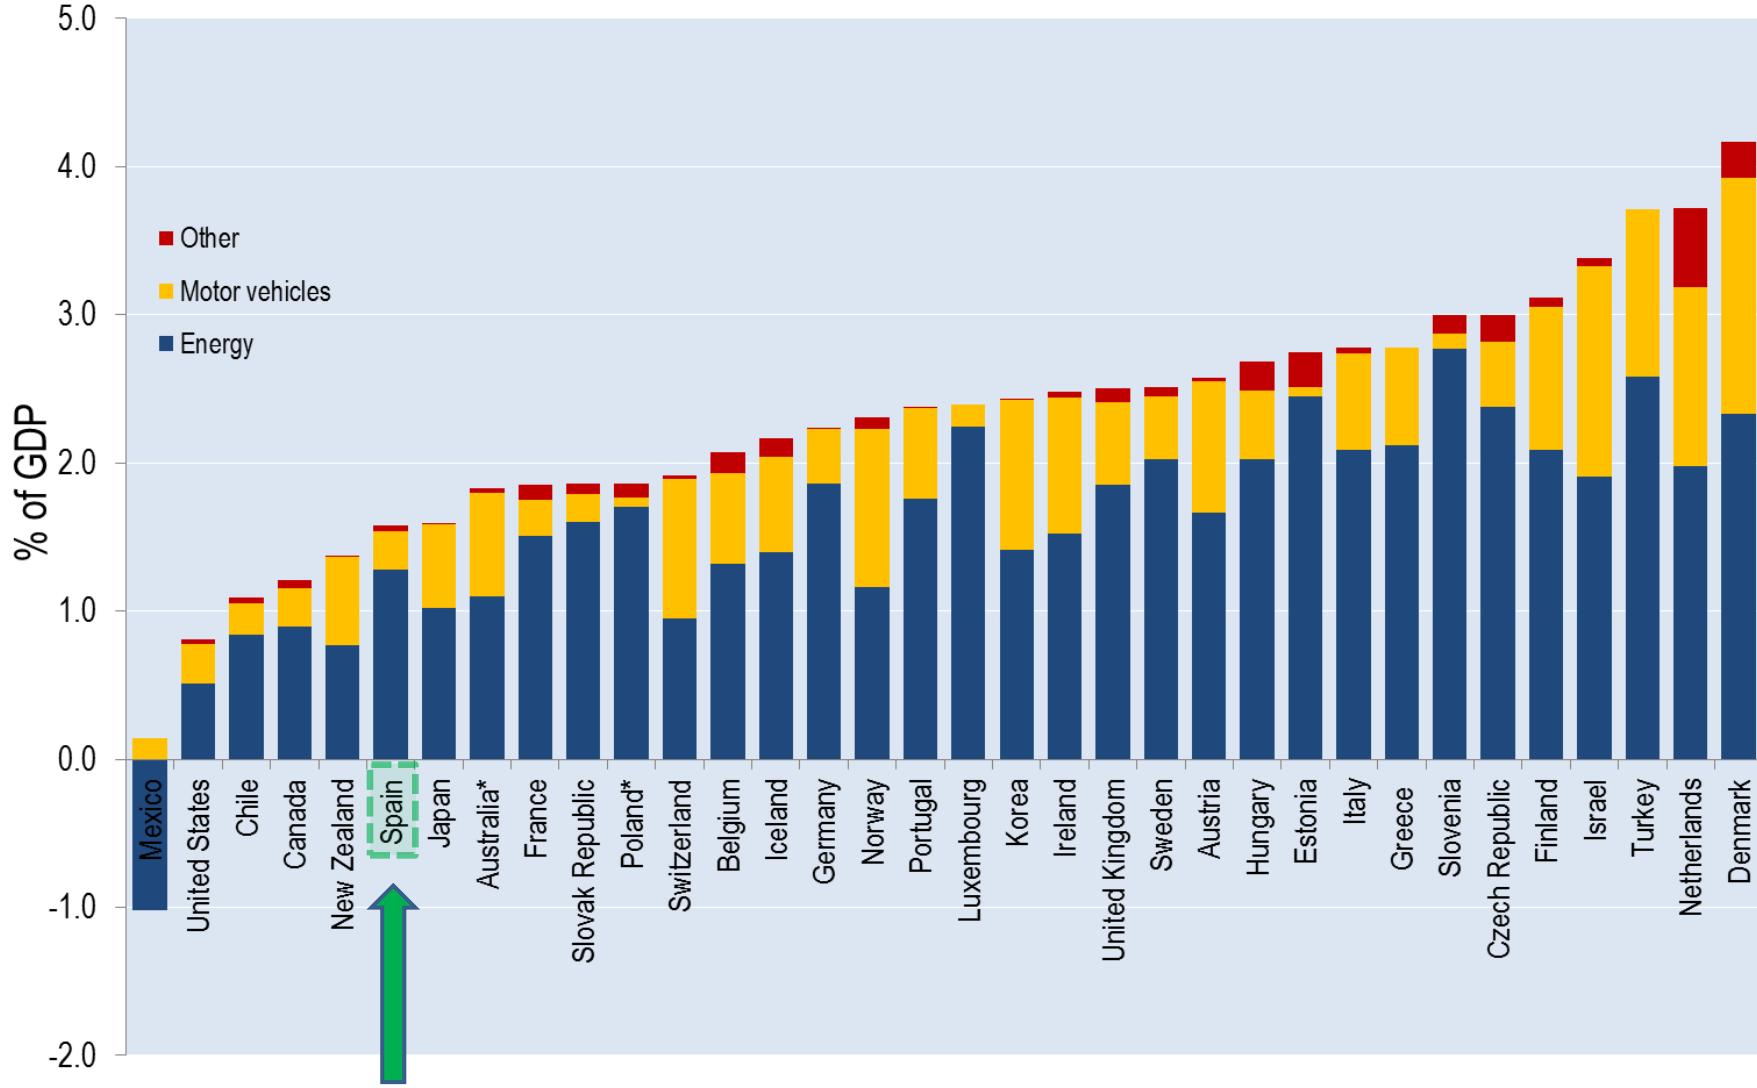

Revenues from environmental taxes

in per cent of total tax revenues

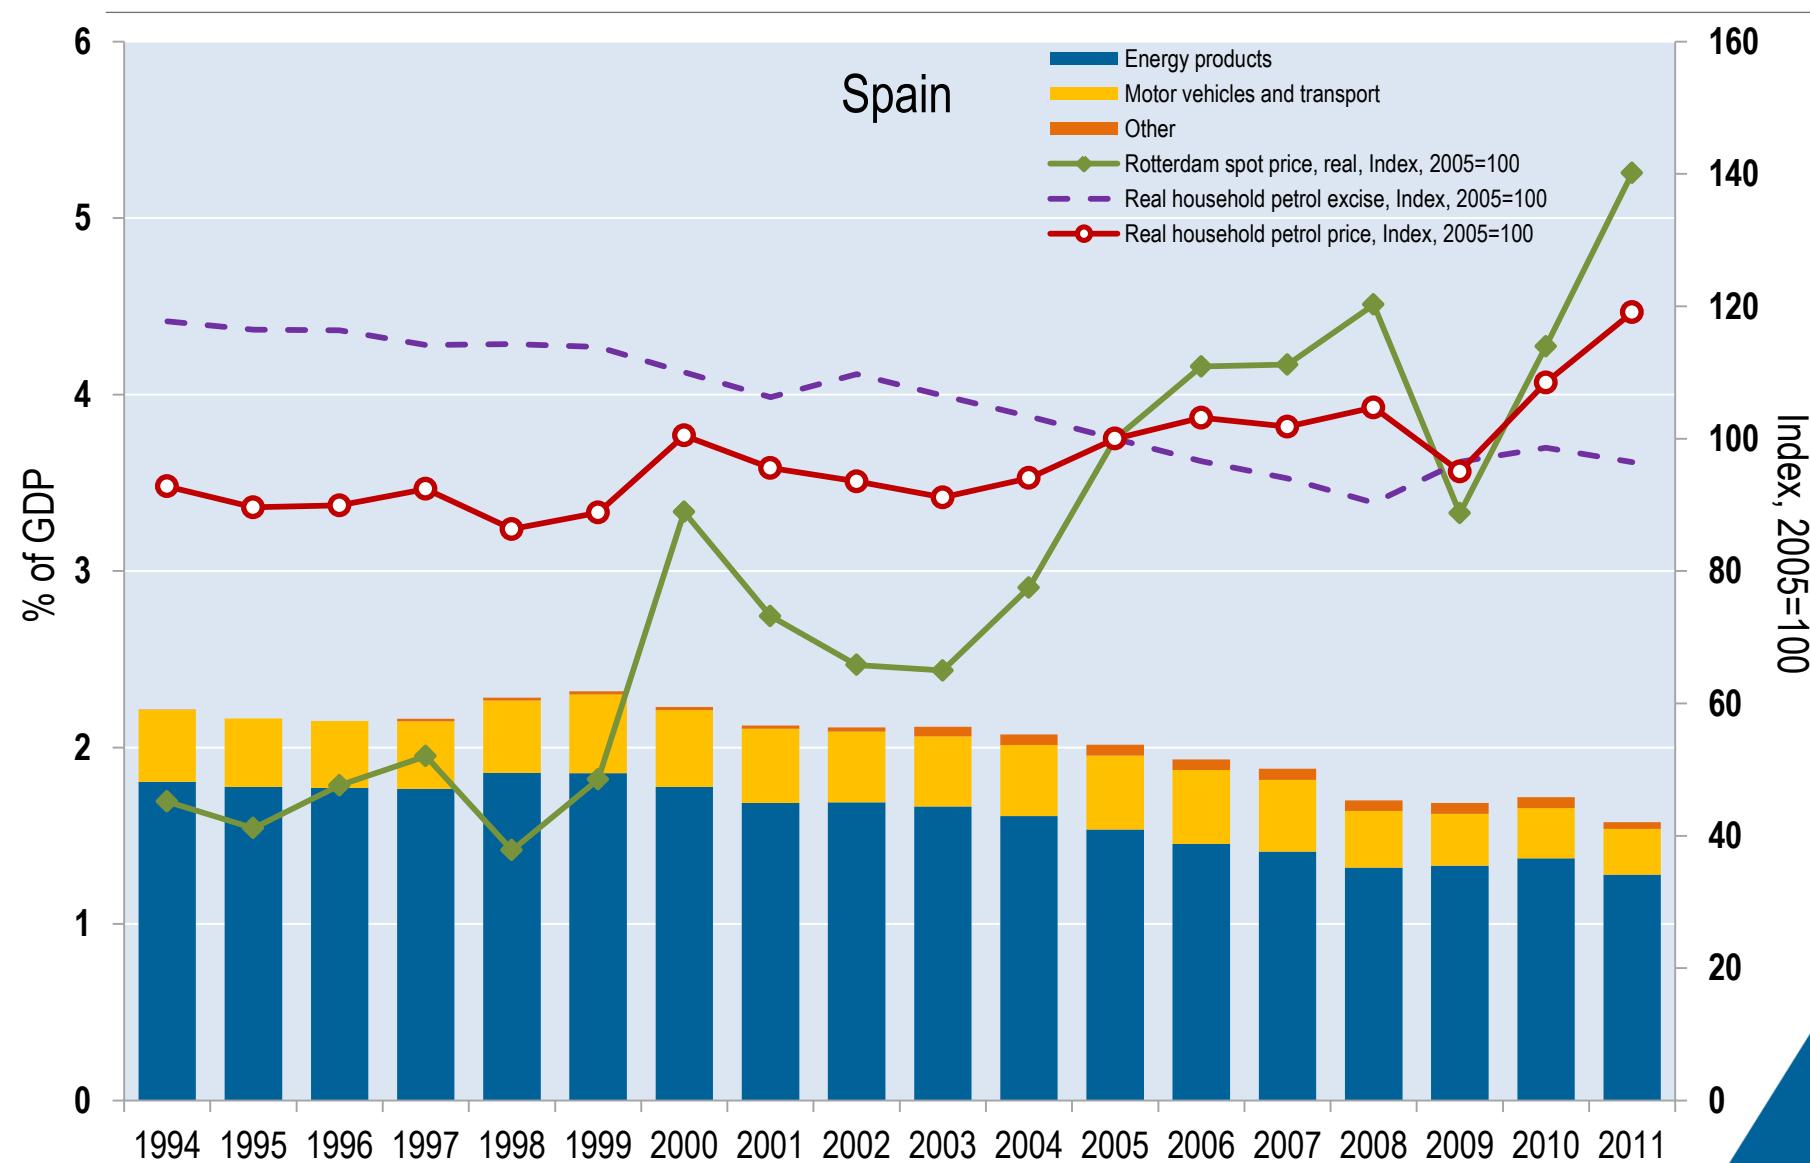

Tax Base

* 2010 figure

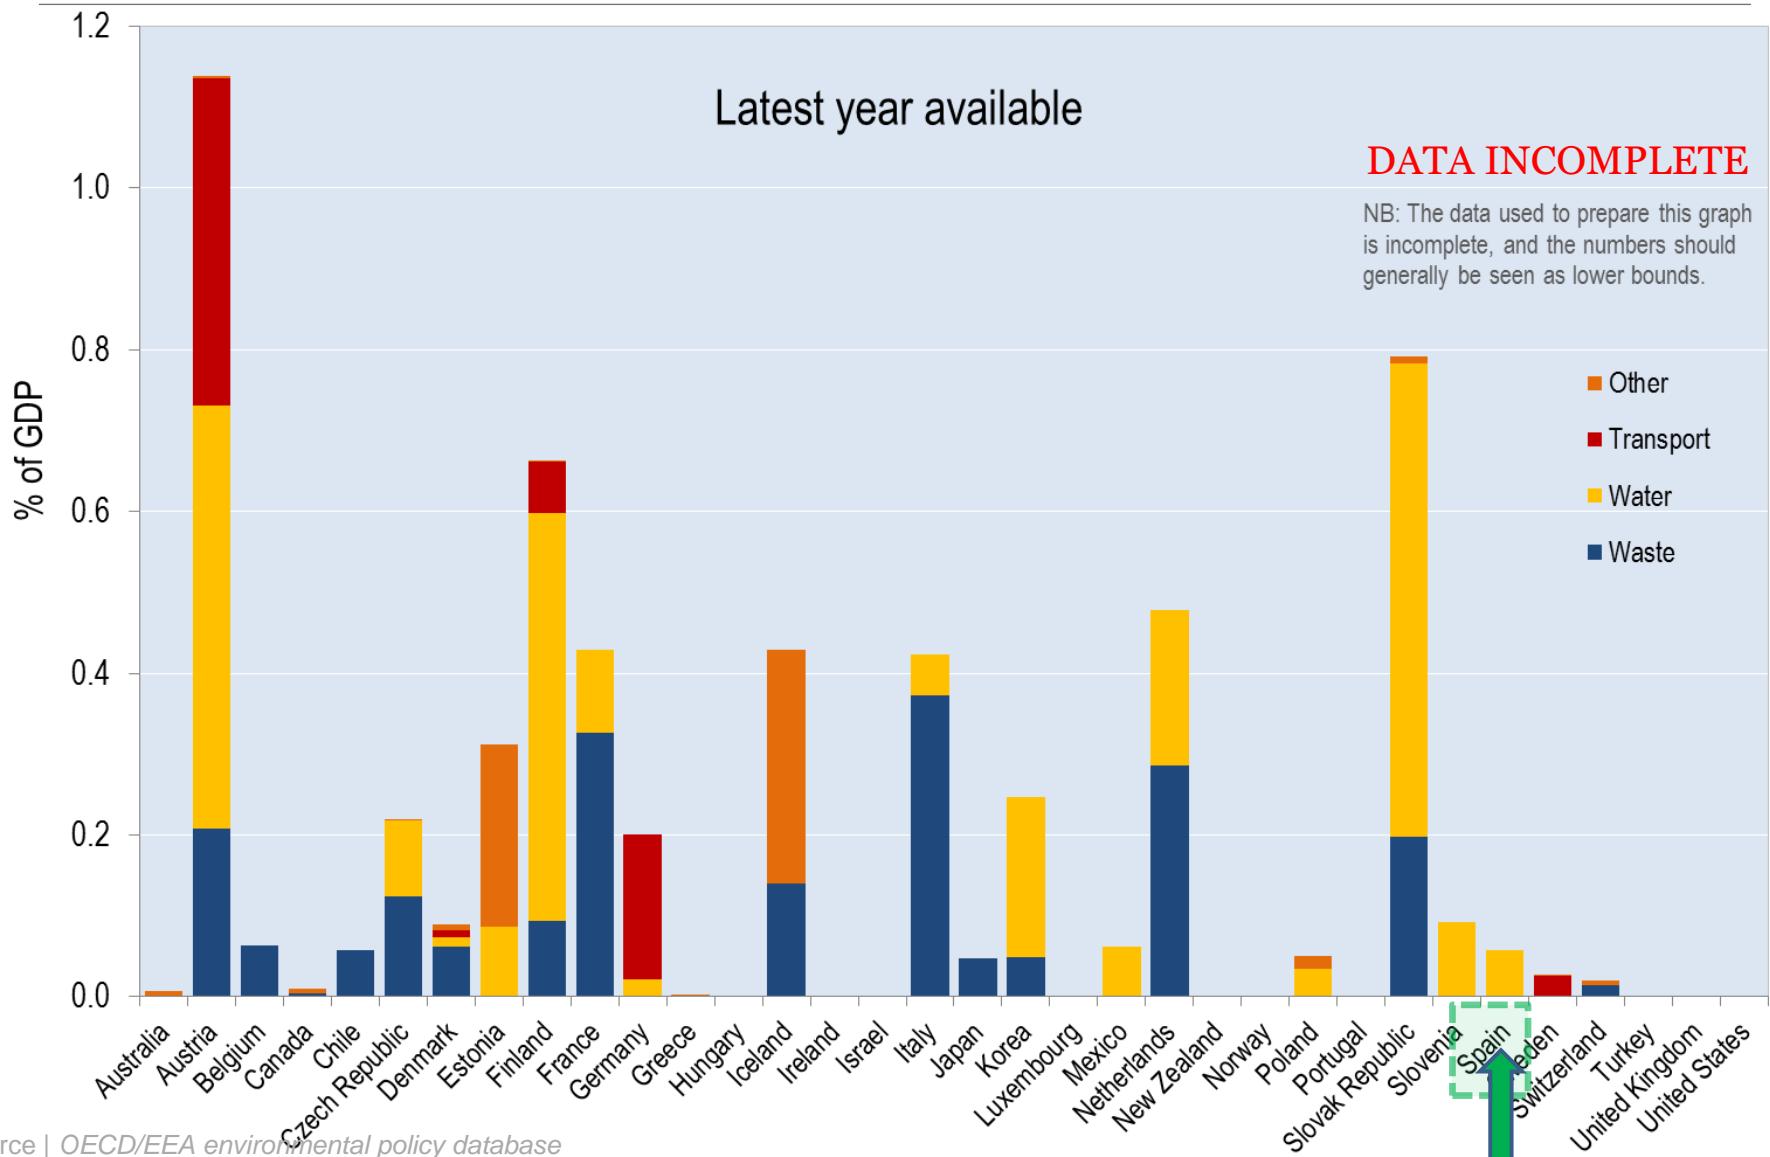

Tax Revenues in Spain

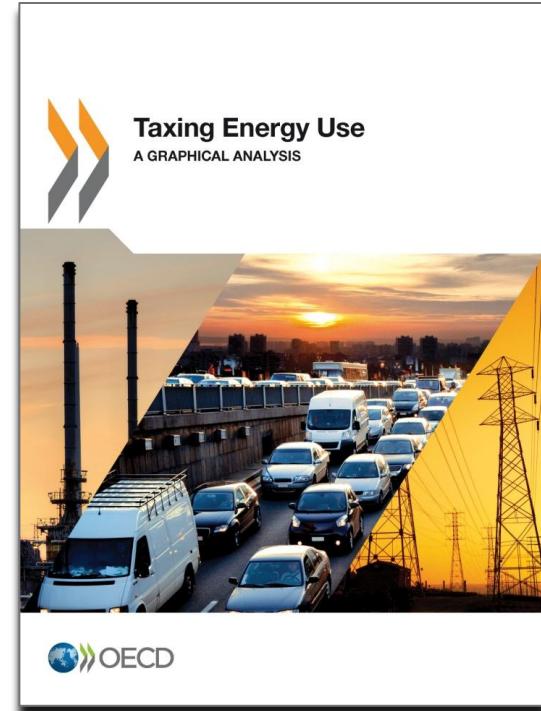

Environmental Fees and Charges

Taxing Energy Use

- **Taxing Energy Use** published in early 2013
- First systematic comparison of the taxation of all energy use across & within OECD countries.
- Considers taxes on fuels as effective taxes on energy & on carbon emissions, highlighting the price signals sent by taxes to different fuels & fuel uses.
- Provides a graphical & statistical profile (a “map”) of the structure of energy use & taxation in each of the 34 OECD countries.
- Uses the underlying data to develop cross-OECD comparisons of effective tax rates on different users and sources of energy.

Effective Tax Rates – Heating & Process Use

Conclusion

- Spain has below average environmentally related tax rates
- → Scope for increasing environmentally related taxes in many areas, e.g.
 - Heating & Process Use
- Tax rates for different fuels vary on an energy content and a carbon emissions basis for the same usage
- → Scope for harmonising tax rates, e.g.
 - Diesel and Gasoline
